

12 Channel
Wireless Radio
Firing-in-Sequence System
the 4th version

Manufactured by E-MadeinCHN

May,2009

What Included...

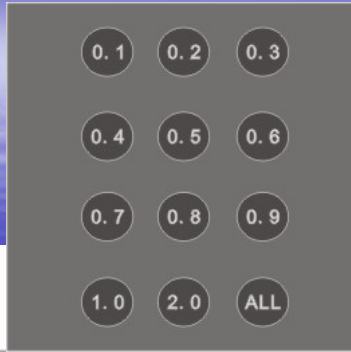

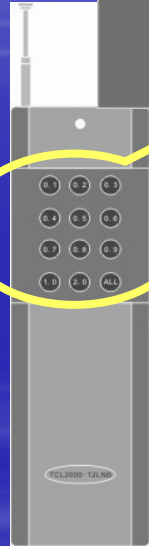

1x

+

1x

+ 12x

Transmitter A

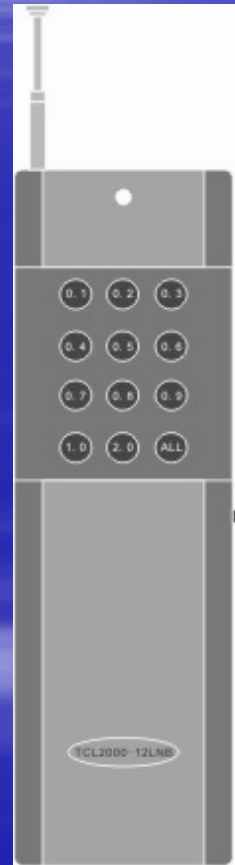

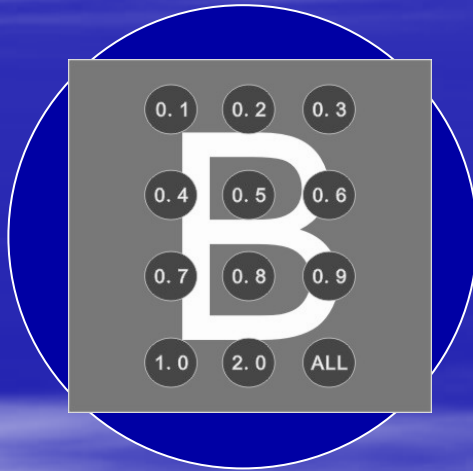

Sequences of receivers
are set through
Transmitter A.

12 Sequences:
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12.

Range 2000m,
With a ON/OFF switch.

Transmitter B

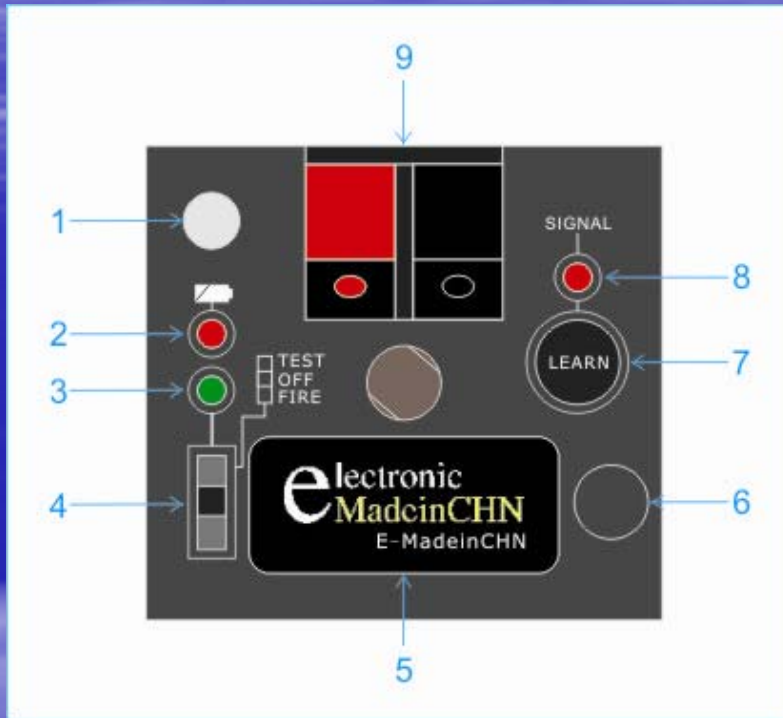

Intervals of receivers
are set through
Transmitter B.

12 Intervals: 0.1s, 0.2s, 0.3s,
0.4s, 0.5s, 0.6s, 0.7s, 0.8s, 0.9s,
1.0s, 2.0s, All.

Range 2000m,
With a ON/OFF switch.

Receiver

Model No.: RF1Se2 (the 4th version)
Channel: 1CH
Power: 4x AAA battery
Firing current: >750mA, Max.6000mA
Test current: <10mA

Extendable antenna, can be folded.
Low Power Indicator
Test Function.
Learning Code.
Fast Fastening Terminals.

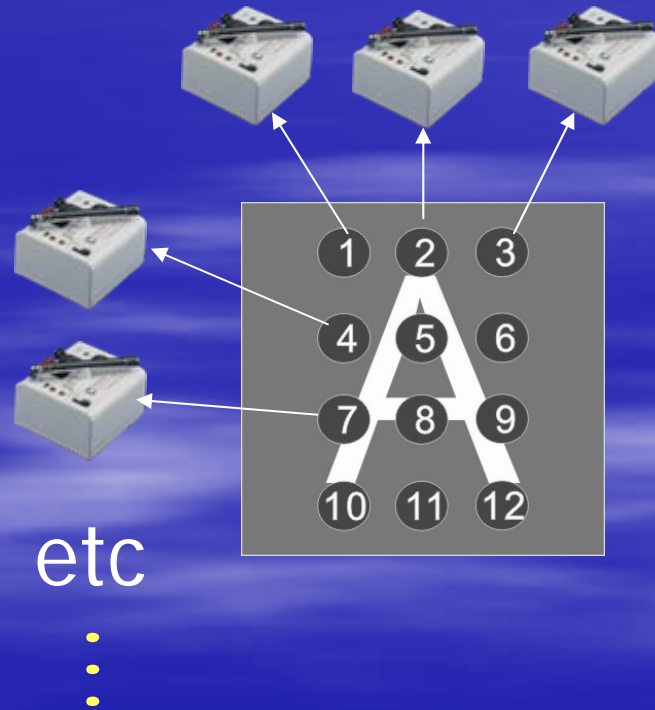

Reliable, Steady, Easy to be used.

How to have transmitters and receivers work together in sequence

■ Step 1: Learn Transmitter A

Different buttons are learned by different receivers, so that receivers are identified sequence No. through the learning of Transmitter A.

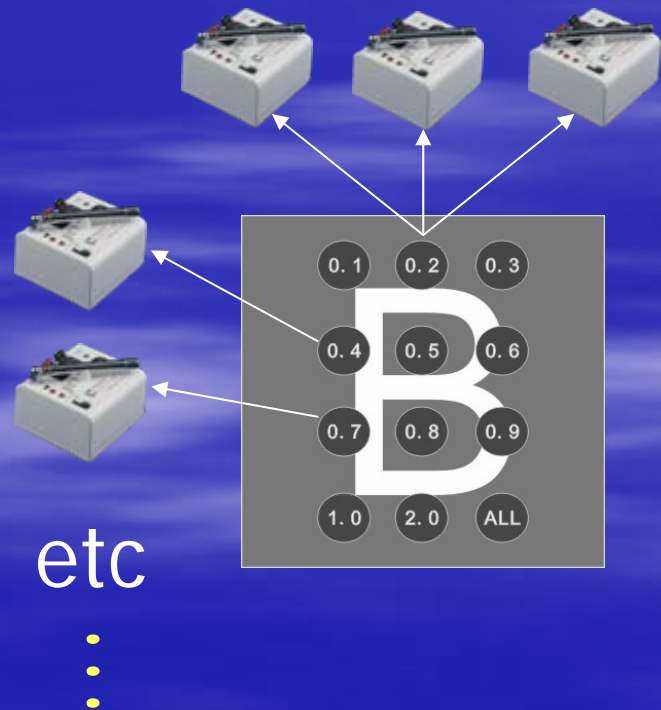

How to have transmitters and receivers work together in sequence

Step 2: Learn Transmitter B

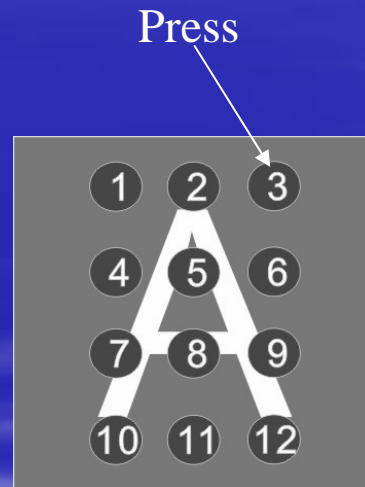

Intervals will be identified by receivers when firing.

Receivers can learn any one of the 12 buttons. Only when Transmitter A is learned, learning Transmitter B is available.

How the system works

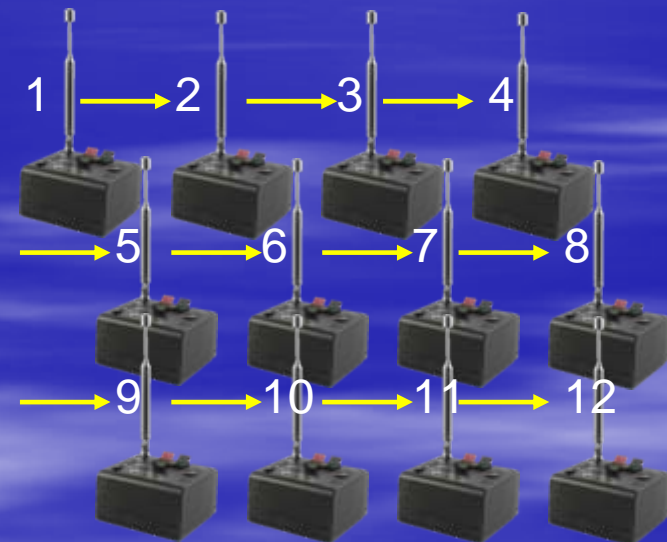

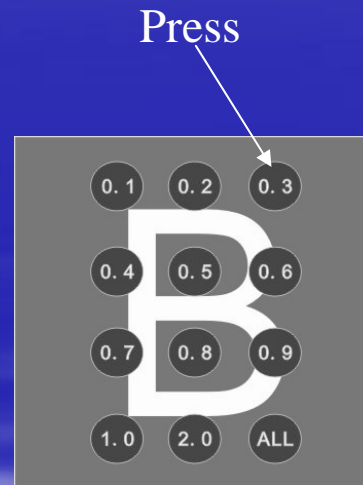

- Mode 1: Instant Fire.
- Use Transmitter A

Press Button 3, Receiver 3 will fire instantly.
The same with other channels.

How the system works

- Mode 2: Fire in sequence
- Use Transmitter B

Press Button 0.3, all receivers will fire one by one in interval 0.3s. The same with other numeric channels.

Press Button ALL, 12 receivers will fire simultaneously.
